Our template supports five menu types:

- Mega menu
- Moo menu
- CSS menu
- Split menu
- Dropline menu

Each of these menus has different characteristics. It is important to know that in order to gain an additional functionality offered by "Mega menu", a user has to install a plug-in which can be found in the rest-files package of a particular template.

"Split menu" and "Dropline menu" are usually double-level menus and they slightly differ in style from one-level menus like: "Mega menu", "Moo menu" or "CSS menu".
